***NOTIFACT AND COM-TROL SIGN WIRELESS
MONITORING AGREEMENT***

*Web Based Wireless System to Offer Plug n' Play Monitoring Solution
for Supermarket Industry*

Fairfield, NJ and Conyers, GA – Notifact, the leader in wireless equipment monitoring, and Com-Trol, an Invensys Group Company, today announced an agreement to develop and market Notifact-ready "plug and play" communications for Com-Trol's state of the art Energy Management and Control System. The Notifact Wireless Monitoring System (WMS) will provide bi-directional communications capabilities to the Com-Trol System. Notifact WMS provides real-time monitoring of HVAC/R equipment without dedicated phone lines by applying Internet server and wireless technologies.

"This agreement will allow us to capitalize on the market strength and position of both companies to offer owners and facility managers the greatest reliability for critical food storage and energy management applications,"

Kevin Duffy, Vice President, Sales and Marketing, *Notifact*, said. "By applying the *Notifact* wireless monitoring system, Com-Trol now offers customers the ability to notify them of an equipment alarm or pending failure... all without complex modems and expensive phone lines."

"Plug and play" connections will enable every alarm point configured on the Com-Trol System to be communicated wirelessly, direct to Com-Trol 's Integrated Services Bureau or facility managers via pagers, cellular phones, faxes and e-mail. The patented, web-based alarm notification system will be completely configurable at the Com-Trol website. The *Notifact* alert message will provide location, equipment identification, and the specific alarm conditions at the site.

Notifact's technology will allow Com-Trol system owners to remotely configure and send commands to the system via standard web browser or WAP communicating device. Service providers will respond with the most qualified personnel, prepared with the proper parts and tools, greatly reducing equipment down time and costly business disruptions.

Notifact uses a full duplex, automatic roaming, kilobyte packet data messaging service. This means that, unlike paging based services, the same *Notifact* system will operate reliably in metropolitan, suburban and rural areas on the growing cellular network. Com-Trol now provides a single wireless monitoring solution to its customers anywhere in North America.

"The *Notifact* partnership really made sense on several levels," Clay Newman, Vice President and General Manager of Com-Trol said. "Real-time

notification of equipment malfunctions is essential to reducing energy costs, eliminating product loss, improving response and service and increasing equipment life."

Com-Trol is the leading supplier of turnkey electronic control systems integrating HVAC, refrigeration and lighting control in supermarket and other food and non-food retail facilities. Com-Trol designs, develops, manufactures, installs, services, and markets a complete line of electronic controllers that provide accurate state of the art control, monitor, and alarm functions. Com-Trol equipment is used by industry leading retail facility operators.

The **Notifact** Wireless Monitoring system applies Internet server and wireless technologies to provide real-time monitoring of HVAC/R equipment. Notifact Corp. develops complete custom monitoring solutions for equipment manufacturers, contractors and building owners. These solutions include branded websites, plug and play equipment and integration with service dispatch/CRM systems. Notifact transmits regular diagnostic information, as well as providing early warning for potential system failures. Wireless technology utilizing pagers, cellular phones, and the Internet allows for instant notification of any irregularities, which results in more cost-effective and timely system repairs and fewer business disruptions. Notifact's OEM partners include Lennox Industries, Heatcraft Refrigeration Products, Fireye, and Munters Corporation.
