***NOTIFACT AND CORRIGO, INC. ALLIANCE ENHANCES BUILDING AND
ENERGY MANAGEMENT TECHNOLOGY***

**Real-Time HVAC/R Preventative Maintenance Integrates
With Real-Time Mobile Service Management**

Fairfield, NJ – *Notifact*, a leading provider of real-time HVAC/R equipment monitoring, today announced a strategic partnership with Corrigo, Inc., a leading provider of mobile service management (MSM) solutions for organizations with installation, repair and maintenance functions, to improve preventative maintenance operations and extend the life of HVAC/R systems. This alliance integrates the two companies' web and wireless technologies to offer the most advanced maintenance and service delivery process solution available.

Notifact's Wireless Monitoring System (WMS) applies Web and wireless communication technologies to provide real-time monitoring of heating, ventilation, air conditioning and refrigeration (HVAC/R) systems. Service providers and equipment owners receive regular diagnostic information to maximize system efficiency, as well as providing early warning for potential system failures. Corrigo's mobile service management solution utilizes the Internet, wireless devices and leading edge technology to coordinate the flow of information between tenants, staff, suppliers, contractors, and property managers—driving improvements in customer service, staff productivity, supplier management and asset performance.

The Corrigo-*Notifact* partnership ensures that service staff receives instant notification of irregularities, resulting in timely, cost-effective system repairs and increased staff productivity.

"Integrating Corrigo's distinctive MSM solutions enables us to further streamline HVAC/R system repairs and service," said Kevin Duffy, *Notifact's* vice president of sales and marketing. "By incorporating our WMS system with CorrigoNet, technicians receive preventative maintenance information before the systems malfunction, where they need it the most – in the field."

As part of this alliance, *Notifact's* alarm and monitoring systems will integrate with Corrigo's mobile service management application, CorrigoNet™. When an alarm is triggered, CorrigoNet automatically generates a work order based on the diagnostics of *Notifact's* wireless monitoring system, which is immediately available to service personnel in the field. Property owners benefit from improved operations efficiencies, more responsive customer service and less equipment failure due to proactive preventative maintenance. Tenants benefit from rapid repair response, minimizing any down time associated with extensive system repairs.

"The Corrigo-*Notifact* alliance applies leading technologies to extend the life of assets and reduce capital expenditures through preventative maintenance and proactive service," said Rick Michaux, president of Corrigo. "Combining *Notifact's* WMS direct plug-in communication capabilities with Corrigo's mobile service management solution enables property management companies to effectively differentiate themselves through better service delivery and operations."

About Corrigo

Corrigo, Inc. provides Web-based solutions that drive improvements in customer satisfaction, staff productivity, asset performance and vendor management. These mobile service management solutions apply groundbreaking innovations in wireless technology and the Internet to enable operational improvement in organizations with extensive installation, repair and maintenance functions, including property management, facilities management, residential and building services, and equipment and appliances services.

Corrigo leases its solutions over the Web and via wireless services, minimizing customers' up-front investment and optimizing opportunities for growth. Corrigo delivers a solution that enhances the entire service delivery process, including implementation tailored to particular business processes, training of employees and 24/7 customer support. Corrigo continues to develop market-driven solutions and services and pursue alliance opportunities with strategic partners. Corrigo is headquartered in Redwood City, California. More information on Corrigo is available at www.corrigo.com.

About Notifact

The *Notifact* Wireless Monitoring system applies Internet server and wireless technologies to provide real-time monitoring of HVAC/R equipment. *Notifact* Corp. develops complete custom monitoring solutions for equipment manufacturers, contractors and building owners. These solutions include branded websites, plug and play equipment and integration with service dispatch/CRM systems. *Notifact* transmits regular diagnostic information, as well as providing early warning for potential system failures. Wireless technology utilizing pagers, cellular phones, and the Internet allows for instant notification of any irregularities, which results in more cost-effective and timely system repairs and fewer business disruptions. *Notifact's* OEM partners include Lennox Industries, Heatcraft Refrigeration Products, Fireye, Liebert Corporation and Munters Corporation. For more information on *Notifact*, please visit the company's Web site at <http://www.notifact.com> or contact Jonathan Gill at 716-842-2233 ext. 1487.
