NOTIFACT CORPORATION WINS AWARD AT NEW JERSEY VENTURE FAIR

Fairfield, New Jersey – The *Notifact* Corporation was recently chosen from over 60 other companies to be named the “Best Early Stage Company” at the New Jersey Technology Council Venture Fair. *Notifact* recently launched the *Notifact* Wireless Monitoring System (WMS) for heating, ventilation, air conditioning and refrigeration systems.

The “Best Early Stage Company” award was presented to the company judged to have the most significant indicators of success, and that is most likely to win the “Company Most Likely to Succeed Award” at next year's Fair. The win means that *Notifact* will automatically go on to the Early Stage East Venture Fair in Delaware in June.

The *Notifact* wireless monitoring system applies Internet server and wireless technologies to provide real-time monitoring of HVAC/R equipment. Presently available throughout North America, the system is a highly cost-effective alternative to traditional monitoring systems, which use dedicated

phone lines and manned call centers. *Notifact* transmits regular diagnostic information for maximizing system efficiency, as well as providing early warning for potential system failures. Wireless technology utilizing pagers, cellular phones and the internet allows for instant notification of any irregularities, which results in more cost-effective and timely system repairs and fewer business interruptions.
